Experience

Virtusa Consulting Services Private Limited

Jul 2025 – Jun 2026

Associate Architect

- Designed and delivered scalable enterprise applications using Java, Spring Boot, Microservices, and REST APIs supporting high-volume business operations while ensuring performance, reliability, maintainability, and stability.
- Led architecture discussions and technical design decisions for distributed systems and cloud-native platforms while aligning implementation approaches with business priorities, engineering standards, and long-term technology goals.
- Built and optimized backend services with emphasis on scalability, fault tolerance, observability, security, and maintainability to support mission critical enterprise applications operating across business domains and workloads.
- Collaborated with stakeholders, product owners, architects, and engineering teams to translate business requirements into scalable technical solutions while ensuring timely delivery, technical alignment, and successful delivery.
- Improved application performance through database optimization, caching strategies, bottleneck analysis, and efficient service design, resulting in improved response times, higher throughput, and better platform reliability overall.
- Established engineering best practices including code reviews, CI/CD automation, testing standards, deployment strategies, and development governance to improve software quality, consistency, and release efficiency across teams.
- Mentored engineers on coding standards, architecture principles, design patterns, and technical problem solving while encouraging collaboration, ownership, continuous learning, and knowledge sharing across development teams globally.
- Worked extensively with SQL and NoSQL databases, messaging systems, event driven architectures, and enterprise integrations supporting highly available, resilient, and scalable platforms serving critical business operations globally.

Temenos

Jul 2021 – Oct 2025

Associate Engineer

- Designed and maintained customer facing airline booking and transaction platforms supporting high volume user activity while ensuring system reliability, availability performance optimization, operational continuity, and resilience
- Improved backend API performance through query optimization, response tuning, and efficient data retrieval strategies resulting in lower latency, improved throughput, platform scalability, improved responsiveness, and reliability
- Designed frontend enhancements for booking and dashboard workflows supporting increasing transaction volumes while improving usability, customer experience, operational efficiency, accessibility, effectiveness, and user satisfaction
- Investigated and resolved complex cross service data consistency issues through detailed log analysis, debugging, and service tracing activities while improving reliability, reducing incidents, and strengthening observability
- Collaborated with multiple engineering teams to maintain platform stability and support business growth initiatives through proactive monitoring, issue triage, incident resolution, operational support activities, and improvements
- Participated in architectural discussions involving service decomposition, API contracts, asynchronous communication patterns, and distributed system design considerations supporting enterprise applications and scalability efforts.
- Conducted code reviews and promoted engineering best practices while contributing to technical design discussions, implementation reviews, continuous improvements, mentoring activities, and quality initiatives across teams globally.
- Worked extensively with Java, Spring Boot, Angular, REST APIs, SQL databases, distributed services, cloud environments, and enterprise integrations supporting mission critical airline and transaction processing systems globally.

Ducont India Systems Pvt Limited

Jun 2019 – Jul 2021

Java Developer

- Developed backend services and REST APIs for financial systems requiring strong consistency, business validation, audit compliance, secure transaction processing, regulatory adherence, and enterprise integration capabilities.
- Improved data validation mechanisms and business rule enforcement processes to reduce downstream operational issues while improving data quality, consistency, platform reliability, operational efficiency, and customer experience.
- Delivered regulatory enhancements and audit related changes while maintaining stability of existing production workflows and ensuring uninterrupted business operations, compliance adherence, and successful release deployments.
- Participated in technical design discussions and code reviews while contributing to new feature implementation, quality improvements, engineering best practices, architecture alignment, and development standardization efforts.
- Supported production environments through proactive monitoring, issue triage, incident management, and root cause analysis activities across multiple services and applications while improving reliability and support responsiveness.

- Collaborated with engineering teams and business stakeholders to understand requirements and translate them into scalable technical solutions, implementation plans, delivery milestones, and successful project outcomes worldwide.
- Worked extensively with Java, Spring Boot, SQL databases, REST APIs, and distributed services supporting enterprise financial applications, transaction systems, regulatory workflows, compliance operations, and reporting requirements.
- Contributed to platform stability initiatives through debugging, troubleshooting, performance tuning, preventive maintenance activities, incident investigations, and operational improvements across production environments daily.

Skills

- **Languages:** Java, JavaScript, TypeScript, SQL
- **Frameworks:** Express.js, Spring Framework, Spring Boot, Angular, JPA, Hibernate, Microservices
- **Tools:** Docker, airflow, Jenkins, Git, MongoDB, Apache Kafka, Kafka, Postman
- **Platforms:** AWS, Azure, Kubernetes, Linux

Projects

Banking Marketplace Platform

Oct 2025 – Jun 2026

- Designed and developed a banking marketplace platform integrating financial product providers while supporting scalable product discovery, API orchestration, high availability requirements, transaction capabilities, and integrations.
- Improved product discovery workflows supporting thousands of financial products resulting in lower API response latency, improved scalability, better customer experience, and enhanced platform performance across digital channels.
- Collaborated with distributed engineering teams to improve API contracts, service communication patterns, and consistency across enterprise microservices and integrations while supporting scalability and resiliency initiatives.

Education

Kings Engineering College

B.E in Computer Science; *CGPA: 6*

Apr 2010 – Jul 2014

Chennai
